Doors Make the Difference

Sustainably made in the United States

stilechoice.com
Let’s cut to the chase: At IHS Door Company we do one thing, and we do it really well. We make MDF stile and rail doors. Quality interior doors, for home or commercial use. And in a myriad of options: sticking, panels, glass, size, whatever a customer wants. That’s STILEChoice®. Doors made right, to your design specs, and delivered quickly.

But it won’t cost you an arm and a leg. Our doors are built to the highest construction standards, yet priced very competitively for a simple reason: This is all we make. We’re invested in delivering precisely what a customer needs, not in costly inventory, marketing, or other overhead. The only thing we pass on to you is an exceptional door, made to your order.

Why should it be any more complicated?

We do quality.

Exceptional MDF stile and rail doors.
Made 100% in the USA, nothing imported. So no waiting, no size or design limitations, and superior quality control.

STILEChoice® Doors are MDF stile and rail construction. STILEChoice® MDF is a 95% (or more) recycled material that delivers superior design advantages and finishing properties.

It’s a less complicated, more versatile product, easily adapted to any design.
For doors that go beyond traditional panel and rail designs, we’ve got you covered.

- We make sliding barn door style doors that function as interior accent pieces and are also a great space saving solution.
- Our etched glass panels provide interior flair, whether the design is custom artwork, labels, or a combination.

Even specialty is standard with STILEChoice®

Throughout every step of our manufacturing we pay attention to even the smallest detail. From the clean fit of every joint to protecting your doors during shipping, we ensure you receive a quality product.

844-IHS-DOOR (447-3667) • 715-392-8102 • stilechoice.com
Many of our doors are available as common arch pairs.

These designs represent many of our standard offerings. If you can’t find a design you’d like, show us your door and we’ll match it.

We do options.

Our customers are not limited to what’s standard. We will custom mix sticking and panel choices to your needs.

- With MDF, there’s no limit on variety. Standard for us is custom in most books. We catalog more sticking and panel profiles than other manufacturers—and if we don’t offer exactly what a customer wants, we’ll create it for you. Need a custom rail width or door size? STILEChoice® means we’ll provide exactly what you need for your project. Just ask and we’ll quote it.

- We do custom True Divided Lite (TDL) glass doors—to match our sticking profiles.

With TDL, solid framing divides the glass
Many of the doors are available as common arch pairs

- We can add our standard chevron louvered door panels for an aesthetic effect to any architectural door. The chevron cross section provides ventilation while keeping light out and preserving privacy. Flat louvers are also available.

- STILEChoice® now offers a new and improved modern take on the classic “Miracle Door”. More versions coming soon.

“Miracle Door”: a single flat panel in the center of the door surrounded by a perimeter of stepped moldings.
Because we only make one, exceptional product, we can be efficient, adaptive, and responsive to your needs. Big enough to do the job, small enough that we still hang our hat on personalized customer service.

Stile & Rail Sticking

Panels

We keep it simple.

Specify the door you want
For example, choose:

Design......S200
Stile & rail sticking......AJ
Panel.......49

The order is S200-AJ49
### Specifications:

<table>
<thead>
<tr>
<th>1-3/8&quot; door thickness</th>
<th>1-3/4&quot; door thickness</th>
</tr>
</thead>
</table>

- 4 1/2" stile
- 4 1/2" top rail
- 4" cross rails and mullions
- 7 3/8" lock rail
- 8 1/2" bottom rail

<table>
<thead>
<tr>
<th>1-3/4&quot; door thickness</th>
<th>Commercial 1-3/4&quot; door thickness</th>
</tr>
</thead>
</table>

- 4 13/16" stile
- 4 13/16" top rail
- 4" cross rails and mullions
- 7 3/8" lock rail
- 8 1/2" bottom rail

- 5 7/8" stile
- 5 7/8" top rail
- 4" cross rail and mullions
- 7 3/8" lock rail
- 11 1/2" bottom rail

### Standard Designs

**Over 100-Plus Matching Bifolds**

#### Standard widths

1'0" through 3'0" in 1" increments

#### Standard heights

- 6'8"
- 7'0"
- 7'6" — architecturally correct for 9' ceiling.
- 8'0"

### Glass Doors

**Complete your door package with glass doors**

- All made to order with matching sticking profiles.
- True Divided Lite (TDL) whether you want a 2, 3, 4 or whatever.
- We can make it and it will match the rest of your doors.
- Full view
- Mirror (full view one side and your design on the other side).
- Replace 1 or all of the panel in one of our door designs with glass.
- Clear Tempered, Frosted Tempered and White Laminated are common requests. Let us know if you need anything else.
- Tempered Insulated glass is available for interior use only.

### Louvers

- Replace 1 or more panels in your door with a louver insert.
- Our standard is a hardwood chevron louver. Flat louvers are available as well.

### Matching Hardwood

- 1-3/4" thick doors

### Fire Rated

- Matched to non-rated doors.
- Limited profile sticking options.

### Sustainable

- Recycled content: 95% (or more) of our MDF is recycled material.
- Primed with non-hazardous water-based primer.
- Renewable energy: wood residue from manufacturing is shipped to an electric generation plant.

### Customization:

- **Custom heights, custom profiles (including matching your door)**
- Up to 10' (over 8' only 1-3/4" doors available)

#### Custom widths

- Up to 6' single slabs
- Special designs allow virtually unlimited widths.

#### Custom design & specifications

- Panel and rail layout
- Stile & rail widths

#### Custom profiles

- We will match your sticking and panel.
- Send us a door and we will match it!

**Send us a sketch and we’ll make it!**

---

**These doors are built to perform. We call it the STILEChoice® Advantage.**

**Part One:** The MDF hinge edge is inserted at 90°. This provides a sturdy mounting plane for hardware, an edge that won’t split like wood. Talk is cheap, so in an independent slam test, our doors performed over 519,000 slams (which exceeds the commercial Heavy Duty standard) before we stopped the test.

**Part Two:** We use a square sticking profile that isn’t quite 90°. This simple design enhancement offers substantial performance advantages. Though not obvious to the casual eye, you’ll be amazed at how this profile eases finishing and cleaning, yet achieves a classic look.

Handling and Finishing

Improper handling will void the warranty for warp.

Handling: Doors should not be delivered to the job site until all other trades are complete and concrete floors, plaster and drywall are completely dry. Doors should be stored flat in a dry, well ventilated area. The doors should not be placed directly on the floor, but placed on at least three equally spaced supports (2x4 or similar). DO NOT LEAN DOORS up against the wall (doing so will void any warranty for warp).

Finishing: To properly finish the door use a high quality paint and apply it in strict accordance with the manufacturers specifications. Be sure to patch any minor dents or scratches that have occurred during handling. Do any required final sanding and be sure to wipe the door clean before applying any paint.

Doors are to be finished on both sides and all four edges. Do not leave one side unfinished for a prolonged period of time; when finishing the doors both sides should be finished at the same time. Prolonged time between finishing the 2 faces of the door can lead to warping and void warranty for warp.

IMPORTANT!

Pre-drilling and Screw Information: Use the same size screws that would be appropriate for the size and weight of the door.

Pre-drilling and Tightening: Pilot holes are required and should be between 85% to 90% of the root-diameter of the selected screw and drilled to a depth greater than the screws driven length. Screws should not be overtightened — set the clutch on your drill to minimum.

Hinges: Use 3 hinges on 6’8” and 7’0” doors, and 4 hinges on 7’6” and 8’0”.

Warranty

Improper handling of doors may void any warranty for warp.

2 years for manufacturing defects. Visit stilechoice.com to view the full warranty, download a PDF or contact your supplier for a copy.

We make a wide range of specialty doors for interior locations and applications to allow you to complete your home with matching doors. Here are a few examples:

Clipped Corner doors

Dutch doors

Our doors are proudly manufactured in the U.S.
